

## Heubach expands production capacity for anticorrosive pigments

**Fairless Hills, 01.03.2017.** Heubach is constructing a production facility in the US for anticorrosive pigments which will expand the global production capacity by 4000 t.

This step substantially strengthens Heubach's position not only in North America but globally as well as part of the planned growth strategy.

Heubach is the largest manufacturer of anticorrosives and the global leader in the development and marketing of these specialty pigments. "Production of anticorrosive pigments at Heucotech, our US location near Philadelphia, Pennsylvania is set to commence at the end of 2017. The goal of this expansion is to be able to meet our increased global demand for high-quality and, in particular, zinc-free anticorrosives. But above all, this investment should also ensure that we satisfy the local needs and requirements of our customers in North, South, and Central America to the fullest," says Birgit Genn, Executive Vice President of Heubach GmbH to explain the further investment of the Heubach Group.

Heubach offers an extensive portfolio of anticorrosive pigments. Besides the classic zinc phosphate, Heubach also markets orthophosphate and polyphosphates modified with zinc and/or other substances. These are offered under the brand name HEUCOPHOS®, and the HEUCOSIL™ products, which were developed on the basis of calcium-modified silica. A very specific organic corrosion inhibitor with the name HEUCORIN®, is used in combination with inorganic anticorrosive pigments as a synergist and significantly improves performance in various applications.

With its many years of experience and application laboratories at various locations, Heubach supports customers in selecting the appropriate anticorrosive pigment in order to ensure that the performance of the pigments are maximized in the various applications.

### Signature:

The Heubach Group, with locations in Germany, the USA, India and China, is an owner-operated and internationally acting manufacturer of corrosion protection pigments as well as organic and inorganic color pigments, hybrid pigments and pigment preparations for use in the paint, plastics, ink and building industries, as well as for other high-quality special applications.
