

Heubach has increased the colorant capacity

Langelsheim. Heubach has expanded the colorant production capacity by a cutting-edge, highly flexible production technology which uses a standard set of highly concentrated specially designed base colorants to yield individual colorants which can be mixed according to the customer's requirements. The new Heubach colorant technology concept covers the complete color space and allows for the accurate adjustment of the physical parameters. The concept can be enlarged by adding colorants which will ensure that the future needs and requirements of the market are met.

Heubach's comprehensive service package is now complemented by these just-in-time service options which provide the following advantages:

- Innovative, universal formulation technology
- Quickest possible development and production of tailor-made colorants
- Development of any kind of tinting system configuration
- Highest color accuracy and reproducibility due to very narrow color strength and color shade specification ranges

Heubach has at the same time expanded its well-known universal HEUCOTINT UN tinting system range of water based high-performance pigment preparations by four new tinting lines marketed under the trade name HEUCOTINT™ UN 41, 42, 43 and 44 series.

The sophisticated formulation technology has been further improved, resulting in a HEUCOTINT UN product family which allows the tinting of water – and solvent-based products including silica plasters. It is also compliant with the current regulatory requirements and environmental labels at the same time. All of these colorant tinting systems are specifically designed for point-of-sale tinting (POS) as well as for in-plant applications (IPT).

Signature:

The Heubach Group, with locations in Germany, the USA, India and China, is an owner-operated and internationally acting manufacturer of corrosion protection pigments as well as organic and inorganic color pigments, hybrid pigments and pigment preparations for use in the paint, plastics, ink and building industries, as well as for other high-quality special applications.
